QUESTION

How do I create an "L" shaped or corner cabinet in the corner of a room?

ANSWER

Base, wall and full height cabinets can be created as L-shaped or corner cabinets. Soffits can also be created as corner soffits to match the shape of corner wall cabinets.

To create a corner cabinet

1. Select **Build> Cabinet> Base Cabinet**  from the menu and choose the desired type of cabinet.
 - Base, wall, and full height cabinets are available.
 - Once you choose a cabinet tool and move your cursor into the drawing area, it will appear display the cabinet icon  next to it indicating that a cabinet is ready to be placed.
2. Position the cross hair in a corner of the room. Make sure that the cross hair cursor is very close to the inside corner of the room - within a few plan inches of both walls.

3. Click the mouse button once to place a corner cabinet where the two walls meet.

Note: A regular cabinet may display if the cross hair is not close enough to the corner walls when the cabinet was created. If a regular cabinet is generated, select Edit> Undo from the menu and try again from step 2.

4. If you do not want the lazy susan style corner cabinet, you can modify this to create an L-shaped corner cabinet. Use the **Select Objects**  tool to select the newly placed cabinet, and click on the **Open Object**  edit button to display the **Base Cabinet Specification** dialog.

5. In the **Base Cabinet Specification** dialog, select the **GENERAL** panel, uncheck **Diagonal Door**, and click **OK**.
