Last Modified: **September 28, 2015**

The information in this article applies to:

QUESTION

I would like to know how to create a room with a ceiling that follows the pitch of the roof. How do I do that?

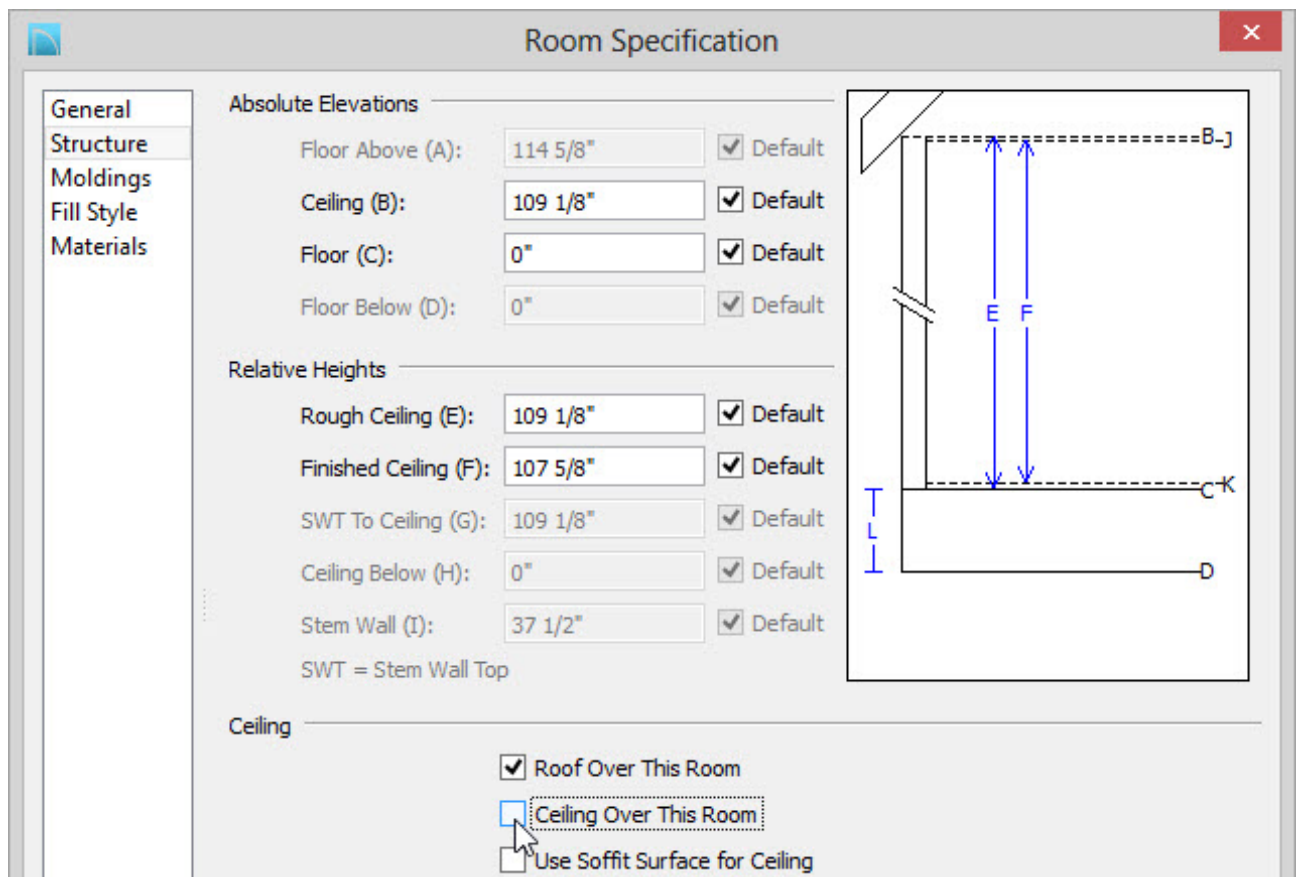

ANSWER

A ceiling that follows the underside of the roof is sometimes referred to as a cathedral ceiling and is easy to create.

To create a cathedral ceiling

1. Launch Home Designer and chose to **Open**  the plan in which you would like to create a cathedral ceiling.
2. Click the **Select Objects**  tool, then click inside of a room you want to have cathedral or vaulted ceiling and click the **Open Object**  edit button.
3. On the **STRUCTURE** panel of the **Room Specification** dialog, uncheck **Ceiling Over This Room**,

4. Click **OK** to close the dialog and apply your change.
5. Next, select **3D> Create Camera View> Full Camera**  and click and drag out a

3D camera view of you design to see that the view of that room will now show the underside of the roof, rather than a flat ceiling.

Note: In Home Designer Pro

(<http://www.homedesignersoftware.com/products/home-designer-pro/>), you can create a vaulted ceiling using custom ceiling planes that do not match the pitch or shape of the roof above.
