QUESTION

When I place a base cabinet in my plan, it has a drawer on top and a door on the bottom. How can I create a bank of drawers instead?

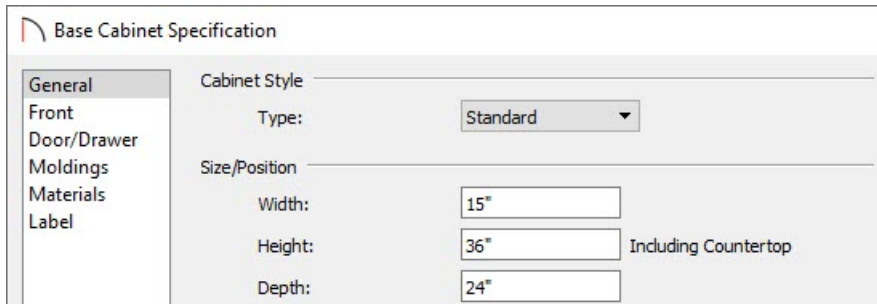

ANSWER

You can easily create a bank of drawers in a base cabinet, full height cabinet, or even in a wall cabinet.

To create a bank of drawers

1. Select **Build> Cabinet> Base Cabinet**  from the menu, then click in your plan to place a base cabinet at that location.
2. Using the **Select Objects**  tool, then click on the cabinet to select it and click the **Open Object**  edit button.
3. On the **GENERAL** panel of the **Base Cabinet Specification** dialog, specify the desired **Height, Width** and **Depth** of the cabinet.

In this example, the Width is changed to 15".

4. On the **FRONT** panel of the dialog:
 - Click on the door in the preview image of the cabinet on the right side of the dialog, click the **Item Type** drop down arrow and select **Drawer** from the list.

The preview updates to reflect your change.
 - Specify the desired **Item Height** for the top drawer in the bank.
 - Click on the empty space beneath the second drawer and repeat the process, until the entire cabinet front is filled with drawers.
 - When you are satisfied with your cabinet, click **OK** to close the dialog and apply your changes.
5. Select **3D> Create Camera View> Full Camera**  from the menu, then click and drag a camera arrow towards your cabinet to see the results.

If you plan to use more than one bank of drawers in your plan, customize one as desired, then use the Copy/Paste edit button to quickly make as many copies of it as you need.

You can also combine any of the options in the **Item Type** drop-down list using wall or full height cabinets.
