QUESTION

How do I draw curved walls in my plan?

ANSWER

Curved walls can be created using the Curved Walls tool, or by using a series of small, segmented straight walls.

Creating curved walls using the Curved Walls Tool

1. To create a curved wall, select Build > Wall from the menu and select from the type of curved wall that applies to your situation, such as a **Curved Exterior Wall** , or **Curved Interior Wall** .
2. Once you have selected the appropriate curved wall type, click in the plan and drag to create a curved wall.

You can also convert a straight wall into a curved wall by using the Select Objects tool to select it, and then clicking on the Change Line/Arc edit button. You can then use the edit handles to further adjust

the now curved wall segment.
