## QUESTION

I need to model a roof without gutters, such as a flat roof or thatched roof style. How can I stop roof gutters from generating on my roof planes?
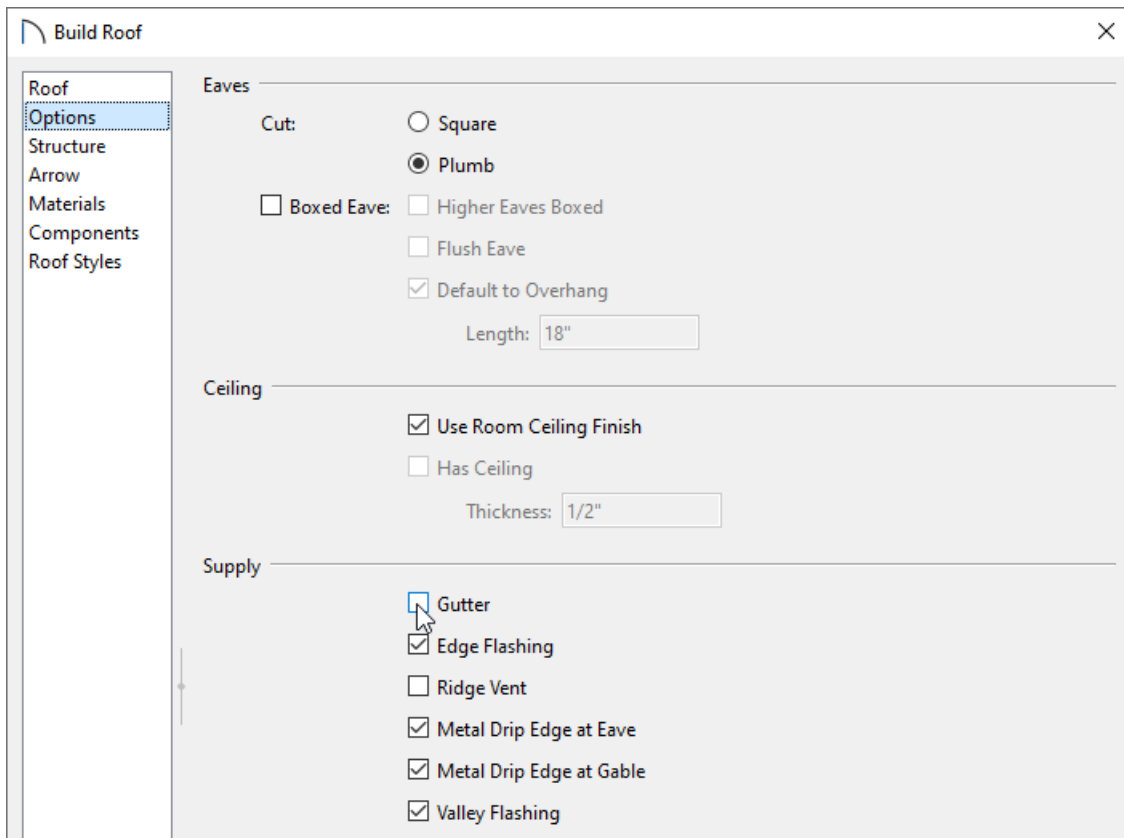

## ANSWER

In Home Designer Pro, gutters can be removed by unchecking the Gutter box in either the Build Roof or Roof Plane Specification dialog.

### To remove roof gutters

1. Select **Build> Roof> Build Roof** .

   Gutters can also be removed from a specific set of roof planes. Using the **Select Objects** tool, click on one or more roof planes, then click the **Open Object** edit button.

2. On the OPTIONS panel of the **Build Roof** or **Roof Plane Specification** dialog, uncheck the **Gutter** box located under the Supply section.

3. If you made this adjustment in the Build Roof dialog, the roof must be rebuilt. Check the **Build Roof Planes** or **Auto Rebuild Roofs** box located on the ROOF panel.

   This step can be skipped if you removed the gutters using the Roof Plane Specification dialog.

4. Click **OK** to confirm the change and close the dialog.
