QUESTION

I am creating a small room below my stairs. It will have a number of fixtures and furnishings in it, and I would like to be able to see these in plan view through the stairs. How can I make the stairs transparent so that I can see the items that will be located below them in floor plan view?

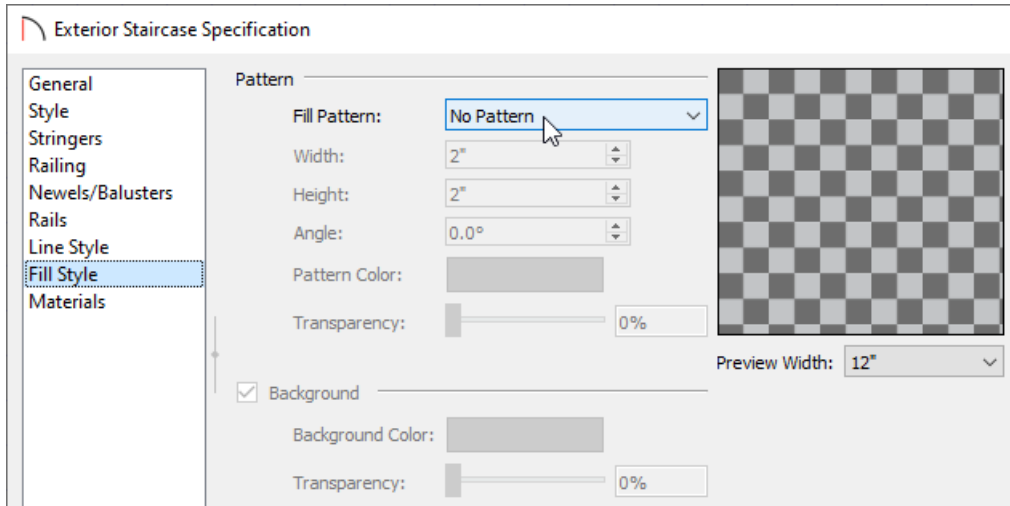

ANSWER

To make objects placed below stairs visible in a floor plan view, change the fill style of the stairs.

To make objects below stairs visible in floor plan view

1. Using the **Select Objects**  tool, select the staircase, then click on the **Open Object**  edit tool.
2. On the **FILL STYLE** panel of the **Staircase Specification** dialog that displays, change the Fill Pattern to **No Pattern** using the drop-down menu.

3. Click **OK** to apply the change.

Objects that are occupying space below the stairs should now be visible in a floor plan view.
