QUESTION

I have a doorway in which I would like to be able to place a railing, but don't want to place individual panels as objects from the Library Browser. I can't seem to place it when there is already a wall there. What can I do?

ANSWER

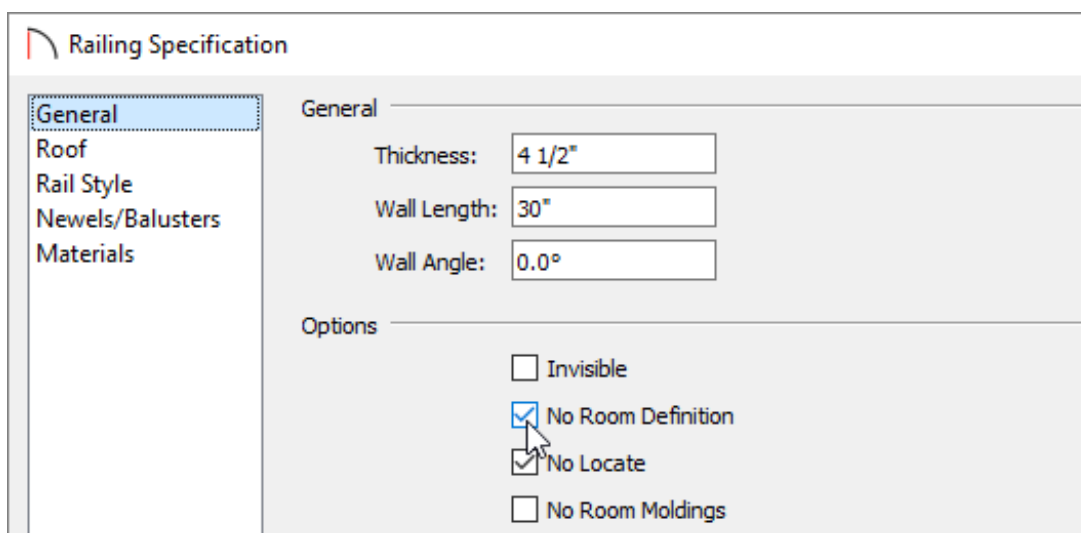

The railing tool can be placed within a doorway by following the steps within this article.

To place a railing in a doorway

1. Select **Build> Railing and Deck> Straight Railing** .
2. On the inside of the doorway, click and drag out a small railing segment that will fit in the doorway once moved.

3. Use the **Select Objects**  tool to select the railing, and click on the **Open Object**  edit tool.
4. On the **GENERAL** panel of the **Railing Specification** dialog that displays, check the **No Room Definition** box.

5. On the **RAIL STYLE** panel, specify the type of Railing that you want to have placed such as Panels, have Post to Beam, etc.
6. Go to the **MATERIALS** panel and specify the materials of the components for the railing.
7. Click **OK** when you have completed making your changes in this dialog.
8. Next, use the **Select Objects**  tool to select the railing. With it selected, hold down the **Ctrl/Command** key on your keyboard, place your mouse cursor over the square **Move**  edit handle, and carefully move the railing segment within the doorway opening.

Holding down the Ctrl/Command key on your keyboard while moving an object allows for unrestricted placement. For more info, see the [Related Articles](#) section below.

9. Take a **Camera**  view to see the results.
