Forcing Chief Architect Programs to Use a Specific Graphics Card in Windows 10/11

Reference Number: **KB-03140** Last Modified: **May 28, 2024**

The information in this article applies to:

QUESTION

Chief Architect doesn't display my dedicated graphics card when I select the Video Card Status panel located in Preferences; instead, the program appears to be utilizing the integrated graphics chip.

How can I force the Chief Architect program to use the more powerful graphics card that's in my computer?

ANSWER

In Windows 10/11, the ability to specify which graphics card is used for each application can be specified in the Display settings.

Please follow the directions in this article to learn how to access the Display settings on your PC, and how to assign a dedicated graphics card to be used with a Chief Architect program.

If you're unsure if your computer has more than one graphics card, please see <u>KB-03129: Locating</u> <u>your Computer's Specifications (https://www.chiefarchitect.com/support/article/KB-03129/locating-your-computer-s-specifications.html)</u>.

To configure a program to use a specific graphics card

1. Close the Chief Architect program.

2. From the Desktop, right-click in an empty area and select **Display settings** from the contextual menu.

	View Sort by Refresh	>
	Paste Paste shortcut	
(2)	NVIDIA Control Panel	
	New	>
	Display settings Personalize	

You can also navigate to **Settings> System> Display**.

3. In Windows 10, scroll down and select the **Graphics settings** link.

In Windows 11, select the **Graphics** category under the Related settings heading.

Settings	— — ×
命 Home	Display
Find a setting	Scale and layout
System	Change the size of text, apps, and other items
🖵 Display	100% ~ Advanced scaling settings
ব») Sound	Display resolution
Notifications & actions	1920 \times 1080 (Recommended) \checkmark
	Display orientation
() Power & sleep	
□ Battery	Multiple displays
📼 Storage	Connect to a wireless display
더 Tablet	Older displays might not always connect automatically. Select Detect to try to connect to them.
曰: Multitasking	Detect
Projecting to this PC	Advanced display settings
% Shared experiences	Graphics settings

4. In Windows 10, under the Choose an app to set preference heading, select **Desktop app** from the drop-down menu.

In Windows 11, under the Add an app heading, select **Desktop app** from the drop-down menu.

Q	Get help		
ĩ	Give feedback		

Note: If the Desktop app option is not available, you may be running an older version of Windows 10. Select Classic App from the menu instead.

5. Click the **Browse** button to open File Explorer. Browse to the Chief Architect or Home Designer executable file, select it, then click **Add**.

By default, executable files for all Chief Architect programs are found in the following location: C:\Program Files\Chief Architect\ [PROGRAM TITLE AND VERSION] .

For example, the executable for Chief Architect Premier X16 is located in: C:\Program Files\Chief Architect\Chief Architect Premier X16.

If you have installed a Chief Architect program to a different drive or location, refer to the location you have installed it to instead.

6. With the desired Chief Architect program now listed, select it, then click the **Options** button.

Note: If you have verified that your computer has more than one graphics card, but you only see a single graphics option listed during this step, it's possible that your monitor's display cables are not plugged into the correct ports on your PC. Verify that the monitors are plugged directly into the video card, if applicable.

8. The high performance graphics card will now be utilized the next time you launch the Chief Architect program.
